Aim: (1.1) Write a program to display “Welcome to Java World".

```
public class Practical1{
        public static void main(String[] args){
                System.out.println("Welcome to Java World");
        }
}
```

Output:

```
[shn@netbook lab_practicals]$ java practical_1.java
Welcome to Java World
[shn@netbook lab_practicals]$
```

Aim: (1.2) Write a program to find whether the number is prime or Not.

```
import java.util.Scanner;

public class Practical_1b{
  public static void main(String[] args){
    System.out.println("Please enter a number: ");
    Scanner sc = new Scanner(System.in);
    int usr_inp = sc.nextInt();

    int count = 0;
    for(int i = 1; i<= usr_inp; i++){
      if(usr_inp % i == 0){
        count++;
      }
    }
    if(count == 2){
      System.out.println("It is a Prime Number");
    }
    else{
      System.out.println("It is not a Prime Number");
    }
  }
}
```

Output:

```
[shn@netbook lab_practicals]$ java P
Please enter a number
2
It is a Prime number
[shn@netbook lab_practicals]$ java P
Please enter a number
11
It is a prime number
[shn@netbook lab_practicals]$ java P
Please enter a number
8
Not a Prime number
```

Aim: (1.3) Write a program to find a greater number among given three numbers using a) ternary operator b) nested if

a) ternary operator

```
public class Practical_1c1{
        public static void main(String[] args){
                int no_1 = -9;
                int no_2 = 230;
                int no_3 = -231;
                int max_no = (no_1 > no_2) ? no_1 : no_2;
                max_no = (max_no > no_3) ? max_no : no_3;
        System.out.println("The greatest number is: " + max_no);
        }
}
```

Output:

```
                int no_1 = -9;
                int no_2 = 230;
                int no_3 = -231;
Practical_1c.java

[shn@netbook lab_practicals]$ java Practical_1c.java
```

b) nested if

```
public class Practical_1c2{
	public static void main(String[] args){
		int no_1 = -9;
		int no_2 = -231;
		int no_3 = 399;
		int max_no = 0;
		if(no_1 > no_2){
			max_no = no_1;
			if (no_3 > max_no){
				max_no = no_3;
			}
		}
		if(no_2 > no_1){
			max_no = no_2;
			if (no_3 > max_no){
				max_no = no_3;
			}
		}
	System.out.println("The greatest number is: " + max_no);
	}
}
```

Output:

```
                int no_1 = -9;
                int no_2 = -231;
                int no_3 = 399;
Practical_1c.java

[shn@netbook lab_practicals]$ java Practical_1c.java
The greatest number is: 399
```

Aim: (1.4) Write a program to print the Fibonacci series.

```
public class Practical1d{
        public static void main(String[] args){
                int a = 0;
                int b = 1;
                int c = 0;
                System.out.print(a + " " + b + " ");
                for(int i = 0; i < 11; i++){
                        c = a + b;
                        System.out.print(c + " ");
                a = b;
                b = c;
                }
                System.out.println(" ");
        }
}
```

Output:

```
[shn@netbook lab_practicals]$ java Practical_1d.java
0 1 1 2 3 5 8 13 21 34 55 89 144
[shn@netbook lab_practicals]$
```
